

LinksCaddy-Guide

Developer Val Tikhonov

Application Type: Jira Work Management, Jira Software, Jira Service Management

Deployment Type: Jira Cloud

What is shown?:

Jira's top navigation bar in Cloud

Visit: <your-site-name>.atlassian.net

What can we learn?: To access key Jira features, use the application's top navigation bar. No matter where you are in Jira, you'll always see this same menu at the top of the page.

This is a list of dry links for any account. If you're logged into another Jira instance at the same time, you can simply switch to it using the provided links.

For project-dependent services (and API calls), you can choose any existing Jira project key.
